College of Engineering

Najran University

Electrical Engineering Department

Mission Explanation Brochure

1. MISSION

Electrical Engineering program is committed to:

1. Provide students with an accredited Electrical Engineering education of high quality standards.
2. Prepare graduates who possess excellent knowledge and strong competent skills, uphold professional attitudes necessary in fulfilling their responsibilities towards the Almighty, society and meet the industry's expectations.
3. Conduct high quality applied Electrical Engineering research using the best modern technology.
4. Provide innovative solutions for Electrical Engineering problems that contribute to sustainable development.
5. Build knowledge based society nationally and internationally.

2. Beneficiaries of the program message:

1. Students
2. Faculty members
3. Communities

3. Stages of mission drafting:

The Electrical Engineering department has drafted the final program mission through the following stages:

First stage

At this stage, the faculty members in the Electrical Engineering department have selected a number of program missions from national and international universities with the drafting of a number of missions by the members of the department council. The council held several meetings to discuss and compare the points in order to

produce mission draft suitable for the Electrical Engineering program. It is according to the mission of the College of Engineering and the mission of the university.

Second stage

In this stage, professors and students in the Electrical Engineering department have participated to discuss the proposed missions and to select the appropriate missions for the program. Brainstorming sessions has been held to discuss the proposed draft missions and to choose the most appropriate mission for the program. During the brainstorming sessions, the final draft of the program mission was agreed. This mission was then approved by the department council and the faculty council.

Third stage

To publish the program mission of the Electrical Engineering program and to, widely, inform the beneficiaries about it, many posters as well as several pamphlets has been printed and widely distributed. In addition, continuous broadcasting of the mission on all the department screens and the department website has been displayed. Students, employers and graduates were periodically discussed about the mission and the procedures for updating it and reviewing it to suit the needs of the beneficiaries.

No	Mission clause	Explanation
1	Provide students with an accredited Electrical Engineering education of high quality standards.	Providing students with accredited education according to the "National Accrediting Authorities" as well as "ABET" standards.
2	Prepare graduates who possess excellent knowledge and strong competent skills, uphold professional attitudes necessary in fulfilling their responsibilities towards the Almighty, society and meet the industry's expectations.	Provide the students a deep knowledge and skills of the electrical engineering program in their specialization which are necessary to perfectly carry out their tasks to meet the needs of the labor market and community service.
3	Conduct high quality applied Electrical Engineering research using the best modern technology.	The faculty and students of the program conduct scientific research and consultations that serve the needs of the national and international community.
4	Provide innovative solutions for Electrical Engineering problems that contribute to sustainable development.	Providing innovative solutions to the problems of Electrical Engineering through the research carried out by the faculty members and through the graduation projects carried out by the students, as well as through the department engineering consulting center in the field of Electrical Engineering, which contribute to sustainable development.

5	Build knowledge based society nationally and internationally.	Building a modern engineering knowledge based society that contributes to the renaissance of the national and international community through the graduation of a group of qualified engineers in the field of Electrical Engineering.
